

Logic Instrument announces strategic partnership with 7Starlake to deploy high-performance defense solutions across Europe.

Igny, January 21st, 2026 – Logic Instrument (ALLOG – FR0000044943), a recognized European player in the design and distribution of rugged computing systems for demanding environments, announces the signing of a representation agreement with **7Starlake**, a global innovator in high-end embedded computing. This partnership enables Logic Instrument to integrate rugged embedded computers and high-performance servers into its catalog, targeting the defense, security, and Industry 4.0 sectors.

A Technological Synergy to Meet New Sovereignty Challenges

To face the rapidly evolving threats and the growing need for automation, the computing platforms developed by 7Starlake play a central role: they ensure the processing, integration, and operational reliability of systems deployed in complex environments.

Designed to operate under the most extreme conditions, this equipment centralizes operations across four major application areas:

1. **Counter-Unmanned Aerial Systems (C-UAS):** Cutting-edge computing platforms for real-time data processing from radar sensors, RF jamming, and command systems, ensuring total perimeter protection against unidentified aerial threats.
2. **Autonomous Ground Vehicles (Defense AGVs):** Rugged embedded computers tailored for autonomous vehicles and surveillance robots. These support navigation, perception, control, and communication functions for fully autonomous surveillance and reconnaissance missions, thereby reducing human exposure in sensitive areas.
3. **Automated Transport Solutions (AGV):** Robust and reliable solutions to support automation projects, particularly in demanding industrial environments and automated transport systems.
4. **Critical Land Systems:** High-power, military-standard rugged embedded computers designed for combat management and armored vehicle control.

Logic Instrument's Expertise at the Service of European Deployment

By becoming 7Starlake's preferred partner in Europe, Logic Instrument not only ensures the distribution of these technologies but also provides its expertise in customization, technical support, and compliance with European standards.

Loïc POIRIER, CEO of Logic Instrument, stated:

"This agreement with 7Starlake marks a significant milestone in our development strategy for the defense, security, and industrial markets. Their rugged computing platforms strengthen our offering with reliable, high-performance solutions essential for today's critical applications. This partnership allows us to provide our European customers with technological building blocks that meet the requirements of sovereignty and operational continuity."

About LOGIC INSTRUMENT

Founded in 1987, LOGIC INSTRUMENT develops and markets tablets, smartphones, and laptops designed for harsh environments and the corporate world, running the Google Android and Microsoft Windows operating systems. LOGIC INSTRUMENT operates on every continent. LOGIC INSTRUMENT is listed on Alternext Paris (ALLOG). Recently, with the acquisition of Elexo, a defense specialist, Artic Distribution, Distrame and Glacier Computer in the United States, LOGIC INSTRUMENT has expanded its product offering and expanded its vertical markets, particularly in defense.
